

WHAT IS CLAIMED IS

1. A small memory card to be set in an electric device, comprising :

A substrate having an placed region, a first terminal and a second terminal which placed on both side, the first terminal is formed with a plurality of golden
5 fingers, the second terminal formed with a pull slot, the substrate being inserted into the electric device, so that the plurality of golden fingers may be electrically connected to the electric device; and

At least one memory chip package, which is arranged on the placed region of the substrate, electrically connected to a plurality of golden fingers.

10 2. The small memory card according to claim 1, wherein the first terminal of the substrate is formed with a gap.

3. The small memory card according to claim 1, wherein the pull slot of the second terminal of the substrate is arc shaped-shaped.

15 4. The small memory card according to claim 3, wherein the pull slot of the second terminal of the substrate shapes like a thumb-shaped.
